Objectives

- Differentiate between basic and advanced burn wound physiology.
- Analyze the various aspects included in a complete pediatric assessment.
- Distinguish how surviving a burn injury does not necessarily assume that psychological recovery has been achieved.
- Demonstrate the unique pediatric burn experience both past, present and possible future implications for these injuries.
- Identify, in clinical situations, the key ethical components of beneficence, autonomy, avoidance of malfeasance, and justice.
- Discuss various pain management treatments and how play features into pediatric burn therapy.
- Examine various adjuncts to airway management and distinguish landmarks of pediatric airway physiology.
- Formulate pediatric resuscitation medications with minimal math calculation.

Continuing Education

MIHS designates this educational activity for a maximum of 8.0 education units through the California State Board of Nursing; and a maximum of 8.0 education units through the Arizona State Board of Physical Therapy & the Arizona State Board of Occupational Therapy, 8.0 education units through the Arizona State Board of Respiratory Care and 8.0 Pre-Hospital/Paramedic CE’s.
Dear Colleague,

Please join us for the 10th Annual Burn Care Symposium hosted by the Arizona Burn Center. This one-day conference has been designed for a variety of health care providers at all levels of experience. This educational opportunity will allow participants to collaborate and share new ideas to improve patient outcomes.

Highlights of the curriculum include sessions on general topics such as Critical Care, Wound Care, Pain Control, Reconstruction, and Ethical Issues involved with Burn Care. This all-day session will be devoted to pediatric burn care from the onset of injury through the road to recovery.
